

Example of Research Engineer Job Description

Powered by www.VelvetJobs.com

Our company is growing rapidly and is looking to fill the role of research engineer. To join our growing team, please review the list of responsibilities and qualifications.

Responsibilities for research engineer

- He/She works with UP/module/Integration engineers to incorporate channel stressors, low resistive contacts and low capacitance device structures suitable at scaled geometries
 - Works with PDK team on layout impact, design enablement and runs circuit simulations to bring overall value of new device architectures
 - Works with external partners & universities to develop unique performance elements that can fit into advanced transistor architectures
 - Lead moderate to long term projects resulting in moderate/significant business advantages to JM, including conducting research, designing and running pilot/plant trials, and performing project management functions
 - Create robust, well-designed software packages, in a maintainable, optimized fashion
 - Implementation of prototypes and the design of experiments to evaluate them
 - Validate key algorithms and architectures associated with such prototypes, followed by written reports
 - Transition prototypes into production
 - Work at the Federal Aviation Administration (FAA) Technical Center to develop a system to audit air traffic control operations for compliance with safety standards
 - Work collaboratively to define the system concept, capabilities and technical approach
-

- Gridlab-D Federate
- Beagle Bone Black HIL Demo
- Hardware-in-the-loop Support in C2WT
- Centralized Database Design and Implementation
- Centralized DB Interface
- C2WT Metamodel and Plugins
