Our company is growing rapidly and is searching for experienced candidates for the position of reservoir engineer. Thank you in advance for taking a look at the list of responsibilities and qualifications. We look forward to reviewing your resume.

Responsibilities for reservoir engineer

- Specifies and supervises well modification and stimulation programs to maximize oil and gas recovery
- Assists engineering and other personnel to solve operating problems
- Confers with scientific, engineering, and technical personnel to resolve design, research, and testing problems
- Coordinates the installation, maintenance, and operation of oil field equipment
- Performs field and screening studies of existing assets and potential acquisitions, including associated economic analyses
- Recommends, acquires, and analyzes the necessary test data used to define accurate reservoir characterization
- Conducts exploration project evaluations to include probabilistic analyses
- Provides monitoring and surveillance programs for reservoir performance, and coordinates these programs to determine if the development plan is congruent with management strategy
- Trains and mentors less experienced engineers
- Leads engineering technical project teams to develop, manage and report on detailed project attributes including technical requirements, cost, schedule, resources, and risk mitigation for multiple projects

Qualifications for reservoir engineer

Support Staff

- Adept at interaction with a variety of contacts, internal and external, including management, industry partners, auditors, and financial institutions
- Capacity to recognize areas of improvement and offer sound solutions
- Energetic self-starter with the ability to work in a fast-paced environment and the flexibility of working extended hours as needed
- Excellent communication skills with proven ability to effectively interact with all levels
- Ability to prioritize and complete multiple projects concurrently
