Our growing company is looking for a SAS analyst. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for SAS analyst

- Able to organize workflow and manage time effectively
- Work closely with project team members (Analysts, Scientist Leaders, Analytic Advisors/Managers, Sales and Operations) and clients to complete projects that will meet clients' needs
- Actively participate with project teams to resolve data anomalies and methodology questions
- Generate ad hoc results to support new business development
- Direct and mentor more junior Programmer/Analyst staff to perform portions of modular project programming process
- Generate ad hoc query results to support new business development
- Support training for new hires
- Produce quarterly residual value forecast models in SAS
- Work closely with statistical modelers to apply models in SAS in order to produce accurate, efficient, and traceable forecast results
- Collaborate with Compliance and Finance to ensure reliability, traceability, and compliance with required control points in order to mitigate audit/compliance risk

Qualifications for SAS analyst

- Advanced / Expert level of SAS programming using BASE, EG in Grid environment

- Strong, proven coding and documentation practices
- Must have exceptional problem solving skills and structured thinking
- Experience with very large data sets required
