Our company is looking to fill the role of security analyst, senior. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for security analyst, senior

- Protects our customers, our employees, and our brands by incorporating security and compliance in all decisions and daily job responsibilities
- Certifications like GCIA, GCIH and CISSP (or equivalent) desirable
- Experience in leading professional and practitioner in the cyber security field, with deep knowledge and experience in a breadth of cyber security topics
- Experience in mobile device, network or memory forensics is desirable
- Participate in the design, creation and update of SAP roles with associated entitlements
- Supports Security Site Surveys of launch sites new to the EELV program
- Analysis of threat management data to identify threats and investigate and resolve concerns, as escalated by Tier I SOC analysts
- Utilize security tools, such as SPLUNK, Bit9, TripWire, to protect global information assets and communicate any concerns or threats to global technology business partners
- Provides technical support for forensics services to include evidence seizure, computer forensic analysis and recovery, in support of computer investigations
- Develop and implement security, cybersecurity, and program protection plans in accordance with DoD 5220.22-M

Qualifications for security analyst, senior

- 3+ years' experience supporting IT audits, with thorough understanding of audit evidence
- Solid understanding of security concepts, principles and practices, including fundamental knowledge of the OSI model and TCP/IP
- Business-driven mindset with interest in providing long-term improvements in Information Security
- Previous experience communicating threat and risk profiles to leaders and individual contributors to facilitate progress towards required improvements
