

# Example of Senior Data Scientist Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our company is growing rapidly and is looking to fill the role of senior data scientist. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

## Responsibilities for senior data scientist

- Developing tools to process data streams and static data
- Define the strategic direction under the guidance of the CDO, trading off between competing priorities
- Translate business challenges into data science problems and applications
- Communicate complex solutions in a clear, understandable way to non-experts
- Design algorithms, build models and prototype solutions for multiple business areas
- Build and maintain software solutions while contributing to large-scale object-oriented applications
- Work in partnership with other members of the Global Data Science and Pricing & Analytics teams
- Work in partnership with the Technology team on evolving data architectures and system solutions
- Able to abstract complex business problems and determine how to use a combination of data to provide a clear, actionable and business-driven answer in a clear, compelling way
- Support junior members of the team to develop their technical expertise and delivery skills

## Qualifications for senior data scientist

- Familiarity with statistical methods required
- Experience with MapReduce programming on HDFS or D3.js, Python or Linux
- Knowledge of practical application of engineering science and technology
- Advanced degree in Machine Learning, Computer Science, Electrical Engineering, Physics, Statistics, Applied Math or other quantitative fields
