

Example of Senior Research Job Description

Powered by www.VelvetJobs.com

Our company is searching for experienced candidates for the position of senior research. To join our growing team, please review the list of responsibilities and qualifications.

Responsibilities for senior research

- Strong understanding of capital structures, covenant analysis, recovery analysis and interpretation of indentures
- Experience in covering primary market transactions would be preferable (should have analysed OMs)
- Strong understanding of credit ratings and related methodologies
- Good financial modelling skills and preferably some experience in writing investment notes (background in writing recommendations would be a strong plus)
- Exposure to relative value concepts would be a positive
- Similarly any sector exposure (energy) would also be a positive
- Support the client with any other ad-hoc research requests
- Developing and implementing research studies
- Collaborating with other College departments to complete State and Federal reporting requirements
- Preparing and presenting data to key internal staff and groups

Qualifications for senior research

- Scientist with a BS or MS degree in Pharmacology, Cell Biology, Biochemistry or related area, with a minimum of 3-5 years' experience working in either academia or industry
- The position will require the candidate to work independently but within a team environment

- Experience with qPCR and would be an advantage but not a requirement
- The candidate will be responsible for analyzing and communicating the resulting data to the supervisor and larger research group
- The successful candidate will therefore possess good oral and written communication skills
