Powered by www.VelvetJobs.com

Our innovative and growing company is searching for experienced candidates for the position of senior UX architect. If you are looking for an exciting place to work, please take a look at the list of qualifications below.

Responsibilities for senior UX architect

- Work with emerging technologies like Blockchain, IoT, and Data Virtualization
- Bring innovative Next-Gen tech products to market for Enterprise clients
- Employ conceptual thinking to create world-class digital products and services across platforms, synthesizing user needs, business goals, and technical solutions
- This is a lead design / developer role on the development team, working to define and incorporate UI and UX standards, and includes front-end development, and interaction with the Functional, Test, and Architecture teams
- Will work with the Functional and Development teams to build mockups, layouts, and user task flows
- Will work with the developers on the design and development of UI components, UI screen layouts, and UI standards to ensure consistency across multiple applications
- Will work with the developers to enhance application usability and accessibility
- Will illustrate design ideas using storyboards, process flows, wireframes, and prototypes
- Guide and influence the Product/Service development process by leveraging your command of HCI and Design
- Both formally and informally uncover user needs and contexts via primary and secondary research techniques and leverage your learnings to come up with the big idea

-
- Must have broad vision and depth to define new architecture
 - Capable of efficiently handling multiple complex projects in a timely manner
 - Advanced degree in HCI, Computer Science or equivalent, ideal
 - Ability to initiate and lead new activities, and to work independently, in a team
 - 50 – 75% - travel to and work on client/other sites
 - Keep abreast of trends and best practices in interactive design, rich media and information design
