

Example of Software Design Engineer Job Description

Powered by www.VelvetJobs.com

Our growing company is looking to fill the role of software design engineer. Thank you in advance for taking a look at the list of responsibilities and qualifications. We look forward to reviewing your resume.

Responsibilities for software design engineer

- Tech engineers/experts who are passionate about designing, building, and maintaining simple, reliable, and innovative software
- Participate in developing innovative, market-leading electro-mechanical products as part of a cross-functional project team
- Develop embedded software for systems that meet design requirements of customers and industry standards
- Establish software design and test requirement specifications and conduct verification testing during development
- Testing to ensure product performance meets the intended purpose
- Prepare asset monitoring equipment for gathering field test data and evaluate field data to improve design and reliability
- Contribute to project design reviews, schedules and budgets, and deliver engineering work to established plans
- Conduct software DFMEA's to ensure quality, reliability and safety of new and existing products
- Some amateur development experience (personal projects, college project, internships)
- Good knowledge and understanding of relevant technologies (Web Services, API testing, Database, UI stack)

Qualifications for software design engineer

- Deep understanding of Windows and Linux (specifically Suse and uClinux) software operating systems
- Well-developed cultural and communications skills
- Familiarity with software development environments and integrated environments like Visual Studio, Eclipse, CodeWarrior, is preferred
- Working knowledge of back-end server applications
