Our company is hiring for a software dev QA. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for software dev QA

- Develop system and functional level test plans and execute test cases
- Perform the scale and performance testing of various features under stress and deployable configurations
- Work closely with developers to conduct functional specification review and test plan review, then incorporate internal and external feedback
- Into test plan for flawless test execution
- Understand the feature requirements and translate to test cases and test automation
- Perform investigation and analysis to determine root cause of customer found defects
- Create automation test scripts for the test cases, maintain the test repository and deliver the test execution report based on requirement
- This is a technical role, not a managerial role
- Execute functional/performance testing on products using a combination of manual and auto-testing techniques
- Focus on chassis based Fortigate firewall product test

Qualifications for software dev QA

- Good experience in XPath
- Experience in Hadoop is preferred
- Experience in network security, SIEM or UEBA is preferred

- 3+ years of software quality assurance or network engineering experience in routing/switching/network security fields
