Our growing company is looking for a software test lead. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for software test lead

- Work directly with the client's senior leadership to ensure appropriate resource allocation to meet all of the program's test needs
- Managing performance remediation issues when they arise
- The overall goal is to provide feedback about the State of The Product in order to support development and inform development decisions
- Provide feedback on the usability of new features
- Work closely with developers to provide early feedback to new features and functionality
- Communicate with users on our community forum, providing assistance and advice
- Establish test strategy in collaboration with a Software developer in Test
- Manage performance remediation issues when they arise
- You will lead all test design and execution, both manual and automated on your multiple assigned projects
- You will be a part of a team that will be asked to be flexible for odd hour and weekend working as we expect that to be pretty common in first few months on this program

Qualifications for software test lead

- Documenting, tracking and reporting test results, defect history and quality metrics

- Understanding of performance testing concepts and tools (JMeter preferrred)
- Candidates authorized to work in the United States are encouraged to apply
- Experience with multi-tier web applications and technologies (HTTP, HTML, CSS, JavaScript, XML, JSON,) in a service-oriented architecture
- 8+ years experience in QA/Development experience
