

Example of Software Test Specialist Job Description

Powered by www.VelvetJobs.com

Our company is searching for experienced candidates for the position of software test specialist. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for software test specialist

- Document the test case description for reuse
- Integrate the test procedure and test case results in the TestRail test tool environment
- Help system integration and product support for the product sales
- Ensure that the test coverage can adapt to problems reported by customers
- Responsible for performing hands-on new feature and function testing to ensure product functionality is working according to specifications
- Makes use of the individuals' high level of knowledge within areas of specialty
- You will oversee and perform test execution activities, including implementation of test automation procedures and scripts
- You will determine proper prioritization of the testing activities and ensure integrative work and full coverage of test scenarios based on the test plan and observations from concurrent testing activities
- You will be monitoring bug fixing activity and the validation of fixes, support and promote the test efficiency and optimization initiatives
- Once you learn our products inside out , you will have opportunities to get involved with onsite solution integration activities (and this can be done in various locations around the globe, but we don't think you will need to travel more than 20% of your time....)
