

Example of Supply Chain Analyst Job Description

Powered by www.VelvetJobs.com

Our company is looking for a supply chain analyst. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for supply chain analyst

- Develop and implement necessary processes, procedures, and business systems required to optimize the supply chain
- Evaluate current and proposed supplier programs to identify the value these programs create, the value we are able to claim
- Compare programs to one another, and supplier to supplier offering insights as to which programs are of the greatest value to the company, under which circumstances
- Analyze purchasing and cost data, in such a way as to provide management with insights as to opportunities which exist, and are not fully realized
- Partner with suppliers to obtain shared data and evaluate current supplier contracts for enhancement opportunities in support of Lennar's supply chain strategies
- Interpret and analyze freight, shipping and warehousing costs, recommend solutions for optimizing supply chain network and operations
- Drive change through identification, design and implementation of robust processes/strategies that improve supply chain efficiency
- Manage all aspects of wafer start planning for network of internal and external fabs—from tactical execution through defining strategy and execution rules to implementing solutions (with IT team)
- In collaboration with the Purchasing Organization, manage our raw wafer supply and define inventory strategy
- Model and analyze various supply chain scenarios (including ad-hoc requests),
