

Example of Systems Engineer Technical Specialist Job Description

Powered by www.VelvetJobs.com

Our company is growing rapidly and is looking to fill the role of systems engineer technical specialist. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for systems engineer technical specialist

- Conduct research on existing systems and solutions within federal government departments and agencies to aid enterprise-wide interoperability and the technical exchange of information
- Provide systems engineering support for NGA's enterprise IT adoption of community cloud infrastructure, platform, network, transport, enterprise management, and security service offerings
- Provide systems engineering support for Open IT strategy definition, implementation and execution, CONOPS, milestone definition, and roadmap efforts that demonstrate how portfolio strategic needs are realized by evolving technology solutions and aligned to budget, schedule, performance, and risk/opportunity management
- Provide systems engineering guidance necessary to define IT infrastructure service concepts such that developer contracts can go build them
- Brief stakeholders on project status and target collection maintenance based on customer feedback for IC and Cyber Commands
- The contractor shall provide the eXploit Program Management Office (PMO) with analysis based on independent review of deliverables provided by the eXploit Prime Contractor
- The contractor shall participate in technical exchange meetings, program reviews, acquisition panels, and configuration boards as required to ensure the active participation and representation of the PMO

- Development of spreadsheet, database, presentation, media/graphics, and other documentation in support of program efforts
- The contractor shall support the eXploit PMO in the formulation and analysis of new requirements

Qualifications for systems engineer technical specialist

- Active PMI Project Management Professional® certification
- Developing, implementing, integrating, and evaluating IC systems engineering-related projects
- IC experience with agencies/elements
- Experience in writing technical documentation (statements of work, requirements, and associated management briefing packages)
- Working knowledge of cloud implementation concepts
- CISSP-ISSAP, CISSP-ISSEP, CASP CE, or CSSLP required
