

# Example of UI Architect Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our company is searching for experienced candidates for the position of UI architect. Thank you in advance for taking a look at the list of responsibilities and qualifications. We look forward to reviewing your resume.

## Responsibilities for UI architect

- To design elegant & engaging user interfaces on advanced application with HTML5, SVG, Canvas, Web Sockets, RESTful services
- Use SASS to create very maintainable CSS stylesheets with best practices such as BEM
- Build and lead a team of front-end developers
- Evaluate talent of front-end developer candidates and coach others
- Collaborate with business owners and facilitate requirements discussions and approvals
- Member of design team while also leading, advising and directing technical partners/resources
- Advocate of User Centered Design principles and processes
- Extraordinary written documentation and verbal/presentation skills
- Keen eye for great creative design and user experience
- Ability to take said great designs to the next level with creative technical implementation

## Qualifications for UI architect

- Experience in modern web frameworks like Backbone.js, jQuery, Bootstrap, Angular, Knockout, Ember.js, Spring MVC, Grails
- You're excited about the rapid development cycle and feedback loop afforded by Node.js-not only for the server but for the client
- You're a DOM-o-naut-you can whizz through the DOM APIs without jQuery

- Able demonstrate creating well-architected REST APIs using one of the major Node server frameworks (Hapi, Express or Restify will do)
- Familiar with Streams-how they work & why they're awesome!
- Aware that even though Node.js is "single threaded", one can easily achieve multi-core programming using a core Node module
