Our company is hiring for an UI developer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for UI developer

- You will define and implement flow and data models for client-backend communications, integrate external or internal APIs (JSON, REST) for managing dynamic parts of the UI
- Work with team members and technical leads to understand customer requirements
- Perform coding, development, unit testing, and system testing
- Create the necessary documentation for application functionality
- Coordinate with web designers to create re-usable and extensible designs that adhere to the latest web standards
- Provide front-end development to convert web design assets into functional web pages
- Review existing front-end architecture to provide optimal solutions and improvements
- Pair program and review code with other team members
- Create and design interactive experiences
- Conduct code reviews with team from initial wireframes and design comps through implementation

Qualifications for UI developer

- Familiarity with source code control systems such as, Subversion or Git and ticketing systems

- At least two years professional experience building Web sites or Web applications, and applying JavaScript
- MVC specially Backbone preferred
- OOP concepts and best practices
- Experienced or familiar with MVC frameworks, Backbone preferred (we will train Backbone if you don't know)
