

Example of UI / UX Job Description

Powered by www.VelvetJobs.com

Our growing company is looking for an UI / UX. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for UI / UX

- Define UX/UI metrics and apply those same metrics to drive future designs
- Help us evolve a user-centric design model and put the right techniques into practice in an enterprise environment
- Perfect the UI build process and the test framework
- Design and development front-end and to a lesser extent back-end modules
- Work with business stakeholders, UX manager, project management, and software development teams to understand user goals and produce deliverables that exceed expectations
- Proficient in a variety of visual design and prototyping tools
- Create visually appealing and highly usable web pages/tools/interfaces
- Responsible for establishing front-end/UI layer coding standards
- Must be able to multi-task and shift priorities as required by business requirements and deadlines
- Responsible for Day-to-day projects including developing and maintaining design wireframes, visual design, and specifications

Qualifications for UI / UX

- Understanding of not just what needs to be built, but why something needs to be built
- Focus on writing clean, simple, testable code
- Lead through influence to ensure the IT software team's goals and priorities

- 5-6 years of experience implementing and deploying enterprise-grade websites and applications
- 3-5 years of experience working with Adobe Creative Suite
- 3-5 years of experience in securing websites
