

Example of Validation Lead Job Description

Powered by www.VelvetJobs.com

Our company is looking to fill the role of validation lead. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for validation lead

- Optimize board design (performance vs cost trade off) with inputs from design and design-in teams
- Release Test set-up according to required capability (reproducibility and reproducibility) and test time
- Lead the product validation according to plan
- Ensure quality of team work – deliver on commitment
- Report/conclude on product and use case compliancy of the NXP product under test
- Support design-in team during result sharing meetings with customers
- Development of C&Q plans and input to scheduling activities for busy small projects group, in line with Novartis site standards for CQV
- Preparation and review of documents associated with lifecycle of C&Q activities for an API facility including Risk Assessments, DQ, IQ, OQ, IC and OC
- Oversight and implementation of the CQV Program, ensuring quality delivery
- Active participation with Client QA group to ensure compliance with procedures and provision of support to the QA Quality team in audit preparation

Qualifications for validation lead

- Limited exposure to DDR memory interface > 1Ghz - GDDR5/DDR3

- Multiphase switching power supply validation experience a strong plus
- Experience with previous ASIC PVT characterization
- Some exposure to various programming and scripting languages, C/C++ / Java Script, Linux
- High level of experience with the latest Tektronix and Agilent oscilloscopes along with strong debugging techniques to solve complex board level problems
